Dear Hiring Manager,

I am writing to express my strong interest in web and backend engineering opportunities with your organization. As an Associate Tech Lead at Omobio through September 2026, specializing in web and backend engineering, I bring five years of experience delivering secure, scalable applications for telecom operators: from Next.js/React web platforms to REST API design and large-scale data/reporting systems. Having grown through every engineering level at Omobio and contributed to 25+ engagements across 9+ countries, I am confident in my ability to own web delivery from architecture through production.

In that role, I led the SOR (Steering of Roaming) centralized reporting platform, architecting full-stack telecom data-reporting solutions from backend pipelines through web dashboards. As Senior Software Engineer, I built HOPP, Hutch's Next.js 14 web self-care portal, and integrated payment gateway services end-to-end: an OAuth2 client-credentials flow, four request types, and six payment methods including Visa, Mastercard, and Amex.

Key highlights of my career include:

- **Engineering Leadership** — Led a 10+ developer team as Associate Tech Lead, directing web and reporting-platform delivery and serving as technical subject-matter expert for pre-sales engagements.
- **Data & Reporting Platforms** — Architected FirewallBI, a multi-tenant BI platform live across 8 on-prem operator sites (references at 1,500 TPS/16.3M subscribers and 500 TPS/3.5M subscribers): 300+ Logstash pipelines, a mutual-TLS Elasticsearch cluster, and a Python reconciliation framework.
- **Web Delivery & Payments** — Built HOPP (Next.js 14, App Router) with full payment-gateway integration, and contributed to Dialog's MDA device-management platform (PHP Yii2/React) and a BTRC-mandated language-preference platform for Robi (Bangladesh).
- **SQL & Data Engineering** — Delivered SQL/CDR reporting engineering for a live telecom billing platform, recovering ~85,000 dropped records and fixing a 240x query-performance regression via targeted database indexing.

My technical foundation is backed by a B.Sc. in Information Systems (Second Class Upper Division) from the University of Colombo School of Computing, and I am pursuing an M.Sc. in Artificial Intelligence at the University of Moratuwa.

I bring a track record of translating ambiguous requirements into reliable systems, and would welcome the chance to discuss how my background aligns with your team's goals. Thank you for considering my application.

Kind regards,

Pathmika Weerarathna

Associate Tech Lead, Omobio (Pvt) Ltd

B.Sc. Information Systems, University of Colombo School of Computing | M.Sc. Artificial Intelligence, University of Moratuwa
